

WHITE HEALER

A stringent, Antibacterial and Antifungal cream

What's In It?

Effective against bacteria, fungi and viruses, WHITE HEALER contains a blend of 4% Melaleuca Oils which totally inhibit growth of the skin bacteria and fungi which cause primary or secondary skin infections. WHITE HEALER is an astringent and germicidal ointment.

What Does It Do?

WHITE HEALER is a soothing cream with exceptional antimicrobial properties for use with any skin abrasion or wound in greyhounds. In addition, Zinc oxide provides a highly effective sunscreen action for the protection of unpigmented skin. Australian university trials confirm that Melaleuca Oils are 30% more effective than standard Tea Tree Oil on bacterial, fungal and viral skin conditions, and are particularly effective in moist, humid conditions as seen in many skin infections.

How Do I Use It?

Apply WHITE HEALER liberally to the affected area once or twice daily. It is not necessary to bandage wounds, but WHITE HEALER is still effective under bandages. Suitable for all skin, bacterial and fungal infections, including mycotic dermatitis, ringworm, sunburn, skin irritations and infections, cracked skin and pads. It is safe to apply to open wounds.

How Is It Packed?

Available in 100g and 500g packs.
